Health Emergency Information and Risk Assessment
Overview

Contents

1 Overview

2-7 Ongoing events

8 IDSR Report

9 All events currently being monitored

This Weekly Bulletin focuses on public health emergencies occurring in the WHO African region. This week's articles cover:

- Cholera in Zambia
- Floods in the Republic of Congo
- Dengue in Burkina Faso

For each of these events, a brief description, followed by public health measures implemented and an interpretation of the situation is provided.

A table is provided at the end of the bulletin with information on all new and ongoing public health events currently being monitored in the region, as well as recent events that have been controlled and closed.

Major issues and challenges include:

- As the cholera outbreak in Zambia continues to expand rapidly, efforts are being stepped up to halt the spread of disease and save lives. Lusaka, Central and Eastern provinces are the worst affected. Lusaka district is the epicentre of the outbreak. A vaccination campaign is currently underway targeting 1.5 million people, including children, health workers and people at high risk of infection in the worst affected areas. In partnership with Gavi, the Vaccine Alliance, UNICEF and others, WHO is supporting the government to effectively roll out the oral cholera vaccination campaign as well as bolster ongoing outbreak control measures. WHO is working with the government to strengthen the key outbreak response areas; emergency coordination, case management, surveillance, infection prevention and control, bolster water, sanitation and hygiene services as well as increase public awareness on the risks of the disease.
Zambia is currently grappling with a cholera outbreak that commenced in Lusaka in October 2023. The Eastern Province reported cases linked to Malawi and Mozambique, and then the outbreak spread to Northern, Central, Southern, Copperbelt, and North-Western Provinces. On 11 January 2024, 452 cases, including 18 deaths, were reported (CFR 4 %) across six provinces, namely Lusaka, Eastern, Central, Southern, North Western, and Western.

Among the 452 cases, 301 cases (66.6%) were confirmed positive through culture, with Lusaka reporting the highest number of confirmed cases (n=232) representing 51.3% of the total cases. Notably, there has been a general decline in the number of newly reported cases, decreasing from 780 cases on 2 January 2024 to 452 cases (42% decrease) by 11 January 2024.

Between 3 October 2023 and 12 January 2023, a cumulative total of 8 724 cases, including 351 deaths (CFR 4.0%), have been documented across nine provinces, namely Lusaka, Eastern, Northern, Central, Southern, Copperbelt, North-western, Western, and Muchinga. More than 40 districts in these provinces have reported local transmission of cholera.

Lusaka province bears the brunt of the cholera outbreak, constituting 94% (n=8 179) of all reported cases since week 40, 2023. The central province follows with 3.4% (n=263), and the Eastern province with 0.8% (n=67). Lusaka province has the highest attack rate of 257.5 per 100 000 population. High fatality rates have been reported from North-western provinces with a Case fatality rate of 11.5 (3 deaths over 26 cases), followed by Southern provinces with a case fatality rate of 7.4% (4 deaths over 54 cases), western provinces with a case fatality rate of 5.0% (1 death over 20 cases) and Lusaka province with a case fatality rate of 4.0% (338 death over 8 179 cases).

As the cholera outbreak in Zambia continues to expand rapidly, efforts are being stepped up to halt the spread of disease and save lives. Lusaka, Central and Eastern provinces are the worst affected. Lusaka district is the epicentre of the outbreak. A vaccination campaign is currently underway targeting 1.5 million people, including children, health workers and people at high risk of infection in the worst affected areas. In partnership with Gavi, the Vaccine Alliance, UNICEF and others, WHO is supporting the government to effectively roll out the oral cholera vaccination campaign as well as bolster ongoing outbreak control measures. WHO is working with the government to strengthen the key outbreak response areas; emergency coordination, case management, surveillance, infection prevention and control, bolster water, sanitation and hygiene services as well as increase public awareness on the risks of the disease.

PUBLIC HEALTH ACTIONS

To address the cholera outbreak, the country has initiated the following response measures.

- Coordination between the government and partners is ongoing. Additional 200 beds have been donated to Heroes Cholera treatment centres. 84 vehicles have been mobilized to respond to the cholera outbreak by Disaster Management and Mitigation Unit and UN agencies among other private partners.
- Surveillance activities have been heightened in all provinces to enhance early detection and response to cases, and a strategy is underway to integrate all response activities.
- Water, sanitation, and hygiene intervention is ongoing, including chlorine distribution and water quality monitoring, disinfection, and inspections. Across Lusaka city, a total of 102 water tanks, over 300 water tanks, and over 20 000 pit latrines have been installed, supplied with water and emptied, respectively.
- Risk communication and community engagement is ongoing, and activities include, training community-based volunteers on cholera risk communication in affected districts and door-to-door sensitization, radio shows, TV updates and interviews.
- Vaccination activities have been bolstered with a vaccination campaign to launch after 14 January 2024 starting with 1 400 000 doses of cholera vaccine as approved by the International Coordination Group.
SITUATION INTERPRETATION

The current cholera outbreak in Zambia, primarily affecting the capital city of Lusaka, is of great concern due to its persistent threat to the nation’s health security. The extensive impact of the current outbreak is evident in the recorded cases and deaths nationwide, leading to adverse socio-economic consequences. To address this crisis, it is recommended to implement a comprehensive response with a focus on enhanced risk communication and community engagement. Urgent attention is also needed to allocate additional human resources and essential commodities to Cholera Treatment Centers in sub-districts. The response strategy should expand on the distribution of safe, chlorinated water in affected communities while maintaining continuous monitoring of water quality. Sustaining collaboration with other line ministries and partners is crucial for reinforcing the effectiveness of responses and prepositioning essential commodities in other provinces is suggested to ensure preparedness for potential outbreaks in diverse regions.
Floods

EVENT DESCRIPTION

Severe flooding that occurred in late December 2024 in the Northern parts of the Republic of Congo left numerous individuals in a dire need for humanitarian assistance. These floods have led to significant humanitarian crises, exacerbated by continuous heavy rainfall. The government has initiated an evaluation mission in the affected areas.

As of the latest reports on 06 January 2024, 13 950 households, comprising 69 767 individuals, have been affected in four departments and 15 districts. Likouala department, particularly in Liranga, Bétou, Impfondo, and Dongou districts, is the hardest hit, with over 80% of its population and all its districts affected. The floods have resulted in 13 deaths in Liranga and Ntokou districts. Additionally, significant damages to agricultural production have been reported, with over 346 099 hectares of land, including 2 292 hectares of cultivated land, submerged. The situation has forced many to abandon their villages, seeking refuge in community shelters at Liranga and Makotipoko, and leaving over 733 households homeless.

The flooding has severely impacted housing and communication pathways, leaving most families homeless without evacuation or resupply possibilities. Almost all agricultural production, including fruit trees, fishing equipment, and small livestock in the affected areas, remains flooded or destroyed as of 2 January 2024. The persistent rains are expected to worsen the situation, affecting crops, and exacerbating the precariousness and poverty of the riverine populations.

The flood has also heightened health risks, with outbreaks of waterborne diseases like diarrhoea, typhoid, and malaria. The consumption of contaminated river water, exacerbated by the flooding of latrines and waste from healthcare centres, has elevated the risk of epidemics. The suspension of local markets, a vital source of food and income, has immediate consequences for food security and vulnerability in the affected households.

PUBLIC HEALTH ACTIONS

The World Food Programme, through its Advanced Disaster Analysis and Mapping system and field resources, is monitoring the situation daily. The Ministry of Social Affairs, through the Departmental Directorate of Humanitarian Assistance, is planning an evaluation mission in Likouala to reassess the needs of the affected populations. The government’s response focuses on the following actions:

- Immediate Relief interventions are ongoing focusing on the most impacted areas like Likouala through the provision of shelter and necessities to the affected populations.
- Water, sanitation, and hygiene practices are heightened to combat waterborne disease threats, hygiene kits, and medical supplies are being deployed to safeguard public health amidst heightened risks.
- Agricultural support has been enhanced to assist the affected farmers with resources to recover the destroyed or damaged agricultural lands and tools.
- Infrastructure rehabilitation has been intensified to restore the damaged housing and communication pathways and ensure accessibility and security for the affected families.
- Disease Surveillance and control systems has been strengthened to prevent and control the spread of waterborne diseases and other health risks associated with the floods.

SITUATION INTERPRETATION

The floods represent a significant humanitarian crisis, impacting tens of thousands of people and causing substantial economic and health challenges. The scale of the disaster underscores the need for enhanced preparedness and infrastructure resilience to mitigate the impact of such natural disasters in the future. The crisis also highlights the importance of investing in early warning systems and community-based preparedness programs to reduce the vulnerability of communities to future flooding and other climate-related disasters. Continued support and coordinated efforts from national and international stakeholders are essential to address the immediate needs of the affected populations and to implement effective strategies for recovery and resilience building.

Dengue

EVENT DESCRIPTION

Dengue fever is considered an annual, nationwide threat in Burkina Faso; however, risk is highest May-October. Since week 32 of 2023, Burkina Faso has recorded an increase in the number of probable dengue cases, compared to previous weeks of the same year. The outbreak has affected all 13 regions of the country including the Boucle du Mouhoun and the Sahel that are affected by insecurity. The Dengue outbreak is occurring in (99%) 69 out of 70 health districts in Burkina Faso and the most affected regions remain the Center and the Hauts Bassins. The cumulative number of cases from week 32 to week 52 of 2023 yields to 154,867 suspected cases, 70,433 probable cases, 709 deaths (CFR=0.5%).

During week 52 of 2023 to week 1 of 2024, there were 1,633 suspected cases of dengue fever reported that were making up to 1.05% of all suspected cases accounted for in 2023. Additionally, there were 494 probable cases, 70 severe cases hospitalized in healthcare structures and two deaths recorded (CFR= 0.12%). The 13 regions registered a total of 1,633 suspected cases in week 52 of 2023 alone. Particularly the five regions recording the highest number of suspected cases include; Centre 42.2% (n=689), Hauts-Bassins 28.5% (n=466), Sahel 5.6% (n=91), North Central 3.7% (n=60), and South West 3.7% (n=60).

Between week 52, 2023 and week 1, 2024, a total of 3,612 samples of dengue cases were received and 3,017 analyzed at the National Reference Laboratory for Viral Hemorrhagic Fevers (LNR-FHV) in Burkina Faso. The PCR results confirmed 78.8% DEN3 serotypes, 17.1% DEN1 serotypes, 0.45% DEN2 serotypes in circulation. The peak for the Dengue outbreak was week 44 and by Week 52 there was a downward trend in the number of suspected cases, probable cases, severe cases hospitalized, and deaths observed across the country. With health facilities crippled by high dengue cases and security issues, over 3.6 million people in 10 of 13 regions of Burkina Faso lost access to care. This highlights the need to address multiple response challenges to maintain the downward trend of the outbreak.

PUBLIC HEALTH ACTIONS

- Intensified coordination through regular meetings of the national committee and regional epidemic management committees across Burkina Faso.
- Bolstered genomic surveillance by the National Reference Laboratory for Viral Hemorrhagic Fevers of Burkina Faso.
- Strengthening of case management is ongoing through rapid displacement tracking coupled with training of health workers.
- Strengthened risk communication and community engagement through community awareness campaign, media outreaches, community engagement, social media campaigns, influencer briefings, interactive programs, and grassroots mobilization in French and national language firmware. This included the development of a weekly situation reports at the national level by the MoH as an official communication to all partners and stakeholders.
- Continued confirmation of samples from cases in the laboratory, and rapid test distribution for early detection of the outbreak.
- Water and Sanitation activities for vector control were conducted. This included indoor spraying, spatial spraying, canal treatment, breeding site destruction, launch of national larval site eradication with the help of drones covering over 4,800 homes and 3,000 public spaces.

SITUATION INTERPRETATION

Burkina Faso is fighting a major Dengue outbreak and is the most affected among other countries experiencing a multicounty Dengue outbreak in Africa. In recent weeks, Burkina Faso has seen a decreasing trend since week 52, 2023. The fight against Dengue has faced several setbacks including, laboratory shortages, limited resuscitation equipment and emergency medications, lack of blood products, poor sanitation, misinformation about treatment, insufficient emergency medication for severe cases, inadequate mobility, and insecurity. These challenges necessitate urgent support to address present gaps to strengthen response capacity.
Distribution of Suspected cases and deaths of Dengue by region in Burkina Faso, as of December 31, 2023

This crisis is attributed to a consistent increase in rainfall over the last two months of 2023, which caused the Congo River’s water level to rise by 30 cm. As of week 1 of 2023, an estimated 220 891 individuals were directly impacted by the floods. There have been 17 deaths reported across Likouala, Plateaux, Brazzaville, and Pointe-Noire, along with 6 people reported missing in Likouala and the Covette regions. A total of 361 villages and 36 neighborhoods experienced either complete or partial flooding with 2 292 hectares of farmland inundated. Residential structures have been severely affected, leading to widespread destruction of homes and the flooding of administrative buildings. Additionally, the flooding has contaminated local drinking water sources.

| **Ongoing Events** | | | | | | | | | |
| Algeria | Poliomyelitis (cVDPV2) | Grade 2 | 7/14/2022 | 4/11/2022 | 10/25/2023 | 3 | 3 | - | - |

According to Global Polio Eradication Initiative, no case of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported this week. There were three cases reported in 2022.

| Benin | Dengue fever | Grade 3 | 1/1/2023 | 12/20/2023 | 6 | 3 | 1 | 16.70% |

As of 20 December 2023, Benin reported six cases of dengue fever, including three confirmed cases and one death. Confirmed cases were reported from Littoral (n=2) and Couffo (n=1).

| Burkin Faso | Humanitarian crisis (Sahel Region) | Grade 2 | 1/1/2019 | 1/1/2019 | 11/27/2023 | 550 000 | 5 500 000 | - | - |

Since 2015, the security situation in the Sahel and Eastern Burkin Faso has gradually deteriorated due to attacks by armed groups. Access to healthcare services remains a major challenge for the affected population. As of November 2023, 5.5 million People were in need of humanitarian assistance, 3.2 million of which are children and over 2.06 million IDPs registered. The situation remains fluid.

| Burkin Faso | Chikungunya | Ungraded | 9/6/2023 | 9/19/2023 | 10/24/2023 | 214 | 214 | 0 | 0.00% |

On 6 September 2023, the reference laboratory for viral hemorrhagic fevers confirmed a case of chikungunya in a patient from the Pouytenga health district whose sample was collected as part of sentinel surveillance for dengue and other arboviruses. As of 24 October, 214 confirmed cases and no deaths were reported from six health districts: Pouytenga (193, 90%), Ogudougou (10), Zorgo (8), Koudougou (2), and Bobo Dioulasso (1).

| Burkin Faso | Dengue | Grade 3 | 9/11/2023 | 1/1/2023 | 12/18/2023 | 146 878 | 68 346 | 688 | 0.50% |

From the beginning of the outbreak in January to 118 December 2023, a total of 146 878 suspected cases have been documented, with 68 346 confirmed cases and 688 fatalities.

| Burundi | Cholera | Grade 3 | 1/1/2023 | 12/14/2022 | 1/17/2024 | 1 382 | 175 | 9 | - |

The ongoing cholera outbreak was officially declared on 1 January 2023. Cumulatively, a total of 1 382 cases with nine deaths have been reported as of 7 January 2024.

| Burundi | Poliomyelitis (cVDPV2) | Grade 2 | 3/17/2023 | 1/1/2022 | 12/13/2023 | 2 | 2 | 0 | 0.00% |

No cVDPV2 case was reported this week. There is one case reported in 2023 and one in 2022.

| Cameroon | Humanitarian crisis (NORTH- West & South-West) | Protracted 2 | 10/1/2016 | 6/27/2018 | 11/15/2023 | - | - | - | - |

In the North-West and South-West regions, the unstable security situation and persistent violence are exacerbating humanitarian needs. Affected people continue to flee their homes to neighboring villages and communities. Between January and July 2023, humanitarian and security partners reported the displacement of more than 42 000 people in both regions.

| Cameroon | Humanitarian crisis (Sahel Region) | Grade 2 | 12/31/2013 | 6/27/2017 | 11/13/2023 | - | - | - | - |

The Far North region of Cameroon is still facing humanitarian crisis. Localities of this region situated at the border area with Nigeria and Chad, as well as the Lake Chad area, remain the most affected by the armed conflict. Between August and September this year, nearly 6 000 newly displaced people were registered in the Mokolo district following repeated attacks by non-state armed groups. More than 2 200 new asylum seekers/refugees were registered for the same period at the Gourounguel transit site, in Mokolo district of Mayo-Tsanga department.

| Cameroon | Cholera | Grade 3 | 8/31/2021 | 10/25/2021 | 12/3/2023 | 21 222 | 2 084 | 508 | - |

The cholera outbreak in Cameroon is still ongoing and the outbreak is currently active in 10 districts across three regions (Center, Littoral and South-West). In the last epi-week (week 48), three new cases were reported with zero death, this gives a cumulative number of 21 222 cases including 2 084 confirmed by culture (9.8%) and 508 deaths (CFR 2.4%). The median age is 28 years (0.1-103 years) and the M/F ratio of 1.3.

| Cameroon | Diphtheria | Grade 2 | 12/5/2023 | 12/10/2023 | 12/12/2023 | 1 | 0 | 1 | 100.00% |
On 6 November 2023, the MoH reported the case of a child originating from the Djoungolo district in the heart of Yaoundé, Cameroon, presented in a local clinic in town with persistent fever, pain when swallowing, cervical swelling, hoarse cough, hypersalivation, dysphonia with muffled voice, foul breath and snoring with dyspnea. He was immediately referred to the Chantal Biya Reference Center, and another sample was collected and sent to the Centre Pasteur of Cameroon. However, there were no reagents to test for c.diphtheria and the samples were stored. This was clinically diagnosed Diphtheria.

Cameroun Measles Ungraded 4/2/2019 1/1/2023 12/3/2023 6 682 6 535 31 -

From week 1 through week 48 (ending 3 December 2023), 6 535 confirmed measles cases have been reported in Cameroon, including 476 IgM+ and 6 059 epidemiologically linked. At least 31 related deaths (CFR 0.5%) have been reported in 2023.

Cameroun Mpox Protracted 2 2/24/2022 1/1/2022 11/30/2023 45 45 3 6.70%

From 1 January to 30 November 2023, 113 suspected cases of Mpox, including 27 laboratory-confirmed and no deaths have been reported. In 2022, 18 confirmed cases and three deaths were reported in the country.

Cameroun Poliomyelitis (cVDPV2) Grade 2 5/23/2019 1/1/2020 12/6/2023 13 13 0 0.00%

No cVDPV2 cases were reported this week. There were three cases reported in 2023, three others reported in 2021, and seven cases reported in 2020.

Cameroun Yellow Fever Ungraded 11/20/2023 1/23/2023 11/19/2023 48 48 5 10.40%

Between weeks 35 and 42 of 2023, Cameroon recorded six PCR-positive cases of yellow fever. This is in addition to the 42 cases that tested positive by plaque reduction neutralization test (PRNT) between weeks 4 and 46 of 2023. Of the 48 PCR- and PRNT-positive cases, 22 (46%) were unvaccinated against yellow fever, 17 (35%) were vaccinated, and 9 (19%) had unknown vaccination status. These cases were reported from 40 districts in the Center, Littoral, South, West, East, North-West, South-West, North, Adamawa and Far-North regions. Only two cases benefited from in-depth investigation with entomological investigation.

Cape Verde Dengu Grade 3 11/6/2023 11/6/2023 12/3/2023 222 59 0 1.20%

On 6 November 2023, the Ministry of Health Surveillance Service reported two confirmed cases of Dengue through Polymerase Chain Reaction (PCR) testing and one borderline case in the city of Praia, Santiago Island, Cabo Verde. The same day three more suspected cases were reported from the Central Hospital Dr. Agostinho Neto giving a total of six cases including two confirmed with zero death. As of 5 December 2023, 2023, a total of 222 suspected cases, including 59 confirmed cases and no deaths, were reported.

Central African Republic Humanitarian crisis Protracted 2 12/11/2013 12/11/2013 11/20/2023 - - - -

The Central African Republic (CAR) has been facing humanitarian crisis for more than a decade following military-political conflicts. Of the country population of 6.1 million inhabitants, more than half (3.4 million), need humanitarian assistance in 2023. More than 520 000 people are currently internally displaced, 2.5 million are registered as returnees, and 0.75 million are refugees mainly from Chad and Sudan.

Central African Republic Measles Ungraded 3/13/2022 1/1/2023 11/26/2023 3 027 1 145 4 -

At the end of epi-week 47, 2023, the country recorded 3 027 suspected cases and 4 deaths. Since the start of 2023, 15 out of 35 health districts (43%) experienced measles outbreak.

From 4 March 2022 to 26 November 2023, 35 confirmed cases of Mpox and one death have been reported in the country. Since the start of 2023, the country has reported 18 laboratory-confirmed cases, including one death.

Central African Republic Poliomyelitis (cVDPV2) Grade 2 5/24/2019 5/24/2019 12/13/2023 45 45 0 0.00%

A total of 14 cases have been reported in the country this year. In addition, six cases were reported in 2022. Although no new cases were reported in 2021, four cVDPV2 cases were reported in 2020 and 21 cases in 2019 from several outbreaks. The number of confirmed cases reported in 2023 was revised to 14 so far.

Central African Republic Yellow Fever Ungraded 6/12/2023 1/1/2023 11/26/2023 5 5 0 0.00%

There is an ongoing yellow fever outbreak in the Central African Republic (CAR). This year from week 1 through week 47 (ending 26 November), five confirmed cases of yellow fever were recorded for the following districts: Sangha-Mbaéré (1), Berbérati (1), Bambé (2), and Bossembé (1). The number of the confirmed cases this year has been reviewed.

Chad Humanitarian crisis (Sahel region) Protracted 2 2/11/2013 3/1/2016 11/12/2023 - - - -

With the ongoing Sudanese crisis, over 570 000 Sudanese and Chadian people fled Darfur to converge to the eastern entry points of Chad. Chad is the most affected country by the crisis in Sudan as it hosts 49.6% of Sudanese refugees, with thousands of new arrivals every week. These refugees live in numerous formal and informal camps located in 11 health districts across four provinces (Ennedi East, Ouaddai, Sila and Wadi Fira).

Chad Measles Ungraded 5/24/2018 1/1/2023 12/10/2023 10 552 820 8 0.10%

As of Week 49 of 2023 (ending 10 December), 10 552 suspected cases and eight measles-related deaths (CFR 0.1%) were reported in Chad. A total of 820 samples tested IgM positive for measles and 178 tested IgM+ for rubella.

Chad Poliomyelitis (cVDPV2) Grade 2 10/18/2019 9/9/2019 12/13/2023 204 204 0 0.00%

One cVDPV2 case was reported this week, bringing the total number of cases this year to 45. This latest reported case had onset of paralysis on 15 September, from Salamat region of Chad. 44 cVDPV2 cases were reported in 2022, 106 cVDPV2 cases were reported in 2020 from three different outbreaks and nine others were reported in 2019.

From 22 August to 27 November 2023, 21 laboratory-confirmed cases of Mpox, 5 probable cases and 5 deaths were reported.

Congo Poliomyelitis (cVDPV1) Grade 2 3/21/2023 3/1/2023 12/13/2023 1 1 - -

No Circulating vaccine-derived poliovirus type 1 (cVDPV1) cases were reported this week. As of 6 December 2023, only one case reported this year.

Côte d’Ivoire Dengue Grade 3 7/10/2023 6/19/2023 12/3/2023 3895 321 27 0.70%
An outbreak of Dengue fever is ongoing in Ivory Coast. A total of 3895 cases have been reported from 19 June to 3 December 2023, with 321 confirmed cases and 27 deaths (CFR: 0.8%).

In the latest reporting week (week 49), the humanitarian situation in The Democratic Republic of the Congo (DRC) was marked by flooding in several localities of the Tshopo province with 97 516 people affected so far, including 71 388 internally displaced persons (IDPs). There was an arrival in week 48 of 2 135 new IDPs in the provinces of Tshopo (1 104) and South Kivu (1 031) fleeing violences in their respective localities.

As of 12 November 2023, the country had reported 62 803 cumulative cases, with 715 deaths (CFR. 1.1%) across 12 affected provinces.

A total of 305 404 suspected measles cases and 5 688 deaths have been reported from week 1 through week 49 (ending 10 December), 2023. About 77% of these suspected cases are children under five years of age. Among the suspected cases reported, 7 214 were investigated through the case based surveillance system and 3 980 were IgM positive for measles, while 603 were IgM positive for rubella.

No new case of cVDPV2 in 2023 as at week 50. One case was reported in 2022, and another one reported in 2021. The latter case was confirmed on 2 June 2022 by the Ethiopian National Polio Laboratory.

In The Democratic Republic of the Congo , this year, from January to 3 December, a total of 714 confirmed cases are reported out of 13 357 suspected cases and 607 related deaths.

As per the Global Polio Eradication Initiative (GPEI), two cVDPV1 cases were reported this week in Tanganyika bringing the number of cases to 97 last year and 150 in 2022.

As per the Global Polio Eradication Initiative (GPEI), one cVDPV2 case was reported this week in Haut Lomami. There have been 117 cases in 2022 and 372 in 2022.

No new case of cVDPV2 in 2023 as at week 50. One case was reported in 2022, and another one reported in 2021. The latter case was confirmed on 2 June 2022 by the Ethiopian National Polio Laboratory.

Heavy rains, flash, and river floods have caused flood emergency affecting more than 56 woredas in five regions affecting over 1 431 347 people and displaced over 682 197 people and resulted in the deaths of 44 people, mostly from Somali region.

Emergency (IPC Phase 4) outcomes with households in Catastrophe (IPC Phase 5) are expected to persist in southern, southeastern, and northern Ethiopia as per the Famine Early Warning Systems Network (FEWS NET) outlook update. Furthermore, forecasted above-average rainfall driven by El Niño and positive Indian Ocean Dipole conditions — brings not only opportunities like improved harvests and livestock reproduction, but also risks such as displacement, crop losses, and livestock diseases

In northern Ethiopia, humanitarian crisis continues, driven by ongoing natural and manmade challenges including drought-like conditions, floods (in Afar), armed conflict, hunger, and escalating food insecurity. Despite the signing of a peace agreement in 2022, intended to resolve the conflict in Tigray, the surge in humanitarian needs persist across multiple areas, including the Afar and Amhara regions.

Since the index case in August 2022, there have been 28550 cholera cases as at week 50 of 2023. Within this same period, there have been 428 deaths (CFR 1.46%).

Since 4 April 2023, two districts (Logia and Mille) in the Afar region of northeastern Ethiopia have been experiencing an outbreak of dengue fever. As of 3 December 2023, a total of 19 995 cases and 17 deaths associated deaths (CFR 0.09%) have been reported.

Malaria outbreak is still ongoing in Ethiopia. A total of 3 705 401 cases of malaria and 469 deaths reported across the country as of 17 Dec 2023. A total of 116 922 malaria cases and 9 deaths were reported in Epi-week 50 (ending 17 December).

Since August 12, 2023, a total of 237 Woredas across all regions in Ethiopia have been affected by measles outbreak. Currently outbreak remains active in 53 Woredas across the country: As at 3 December 2023, a total of 26 000 cases with 203 deaths have been reported, a Case Fatality Rate (CFR) of 0.78%.

</table>

As of week 50, 2023, there have been a total of 69 reported cases of circulating vaccine-derived poliovirus type 2 (cVDPV2). There was one case reported in 2022, one case in 2021, 10 cases in 2020, and 43 cases in 2019. It’s important to highlight that no cases have been reported in 2023.

A total of 18 cases of dengue fever including 9 confirmed cases and zero deaths, have been reported in Ghana in 2023. An outbreak of diphtheria has been reported in the Kankan region of Guinea since 4 July 2023. As of 4 October 2023, 456 suspected cases have been reported, including 14 confirmed cases. A total of 57 deaths have been recorded. Of the reported cases, 59% are female. The 1-4 years age group is the most affected with 365 cases. Sigui District has reported the highest number of cases (429 cases, 94%).

A strong explosion with a detonation followed by a fire occurred around midnight on the night of December 17 to 18, 2023, in the Kaloum area, specifically at the central fuel depot located in Cononark. This powerful explosion is reported to have caused collapses of buildings (doors, windows, blown away), cracked structures, and torn ceilings and resulted in the death of persons living in the affected area. As of 18 December 2023, 18 deaths and 178 wounded persons were reported.

The impact of the El Niño phenomenon continues to be experienced in the Horn of Africa sub-region. In Kenya, since the beginning of November, heavy rain have resulted in flooding and overflow of rivers, displacing people, causing deaths and properties destruction including roads and households. As of 28 November, it is estimated that 33 counties have experienced above rainfall with a total of 93 645 households affected by the floods and 307 161 people displaced from 15 counties, 123 fatalities are also reported so far.

Climate forecasts indicate that the October to December 2023 short rains in northern and eastern Kenya will likely have an early onset and be cumulatively above average, supported by a strong El Niño event. The rains are expected to improve forage, pasture, and water resources in pastoral areas, supporting livestock body. However, there is an elevated risk that the above-average rainfall will result in flooding in the flood-prone parts of the country and outbreaks of diseases like Rift Valley Fever in pastoral areas. Pastoral areas remain in Crisis (IPC Phase 3) as the pastoral lean season concludes.

In the late afternoon of 26 December 2023, a fuel tanker veered off the road and crashed on the Monrovia-Gbarnga highway. The accident occurred in Totota. After the accident, several persons went to the accident site and others started to scoop fuel from the capsized tanker. As of 29 December, 94 cases have been recorded with an estimated 51 deaths. Response is still ongoing according to WCO.

A cholera outbreak has been ongoing in Kenya since 26 October 2022. As of 22 October 2023, a total of 12 121 cases, with 577 confirmed by culture, and 202 deaths (CFR 1.7%) have been reported in 27 Affected Counties. No new cases were reported as of 17 December 2023.

Since January 2020, a total of 2395 visceral leishmaniasis confirmed and suspected cases with ten (10) deaths (CFR 0.5%) percent), have been reported in nine counties namely: Marsabit, Garissa, Kitui, Baringo, West Pokot, Mandera ,Wajir, Tharaka Nithi and Isiolo. The outbreak is active in West Pokot County.No new cases were reported as of 17 December 2023.

As of 31 August 2023, cumulative 20 cases and 3 deaths were reported. Seventeen of these cases and three deaths were reported in April-May 2023. In August 2023, three new cases emerged in Kendara sub-county, all cases were linked to the handling of an infected animal. No new cases have been reported after August.

Since January 2020, there have been a total of 69 reported cases of circulating vaccine-derived poliovirus type 2 (cVDPV2). There was one case reported in 2022, one case in 2021, 10 cases in 2020, and 43 cases in 2019. It’s important to highlight that no cases have been reported in 2023.

The outbreak has been continuous since 2022, affecting 13 counties in 2023. Cumulatively, 1 325 cases, with 256 confirmed cases and 23 deaths (CFR 1.7%). No new cases have been reported as of 17 December 2023.

According to Global Polio Eradication Initiative, no cVDPV2 cases were reported this week. There have been eight cases reported in 2023.

In the late afternoon of 26 December 2023, a fuel tanker veered off the road and crashed on the Monrovia-Gbarnga highway. The accident occurred in Totota. After the accident, several persons went to the accident site and others started to scoop fuel from the capsized tanker. As of 29 December, 94 cases have been recorded with an estimated 51 deaths. Response is still ongoing according to WCO.

Since the measles outbreak started on 13 December 2021, there have been 12 967 suspected cases, 12 298 confirmed cases, and 95 deaths with CFR 0.7% in 15 affected Counties as of week 42 of 2023. Montserrado County has recorded the highest number of deaths (69).

Liberia confirmed its first case of Mpox on 23 July 2022, with a cumulative total of 119 suspected cases reported and 7 confirmed. The most recent case was in week 42 of 2023 in Grand Kru and Nimba counties.
### Madagascar

| Malnutrition crisis | Protracted | 7/1/2021 | 1/1/2021 | 10/23/2023 | 2,200,000 | - | - | - | - |

About 2.2 million people in Madagascar face food insecurity, including 479,000 children with acute malnutrition. Over 115,000 children need treatment for acute malnutrition this year. The situation is particularly dire in the Grand South and Grand South-east regions, where two out of five people are severely food insecure.

Malawi

| Anthrax | Grade 2 | 11/27/2023 | 11/28/2023 | 11/28/2023 | 1 | 1 | 0 | 0.00% |

This year on 27 November, a case of human cutaneous anthrax was confirmed from Mzimba district, northern Malawi in a 6-year-old female, no death reported so far.

Malawi

| Cholera | Grade 3 | 3/3/2022 | 3/3/2022 | 10/15/2023 | 59,040 | 59,016 | 1,768 | - |

Twenty-nine districts have reported Cholera cases since March 2022 in the Machinga district. As of 15 October 2023, a cumulative total of 59,040 cases and 1,768 deaths (CFR 3.0%) have been reported since the onset of the outbreak.

Malawi

On 15 November 2023, the Ministry of Health (MoH) released a press release on confirmed measles outbreak in Lilongwe district following the notification of 11 laboratory confirmed cases within the same geographical area. As of 6 November, 32 suspected cases including 11 confirmed are reported. Two suspected measles related deaths were also reported.

Malawi

| Poliomyelitis (WPV1) | Grade 2 | 1/31/2022 | 2/21/2023 | 12/18/2023 | 0 | 1 | 0 | 0.00% |

One positive case of wild WPV1 was detected in Lilongwe from a child with the date of onset of paralysis on 19 November 2023. As of December 18, 2023, there were 12 cases in 9 districts of Malawi. No other cases have been reported. Malawi continues participating in the multi-country, subregional outbreak response to control the WPV1 outbreak.

Mali

| Humanitarian crisis (Sahel region) | Grade 2 | 9/11/2017 | 12/19/2023 | 750,000 | - | - | - | - |

Mali is facing protracted conflict, poverty, climate shocks, and growing insecurity. However, the current Humanitarian Response Plan for Mali is severely underfunded, with only 11% of the required funding secured. There has been a significant increase in IDPs in the regions of Kidal (32.8%) and Ménaka (20%). As of week 50, over 7.5 million people are in need of humanitarian assistance.

Mali

| Chikungunya | Ungraded | 10/2/2023 | 10/5/2023 | 10/5/2023 | 1 | 1 | 0 | 0.00% |

The Ministry of Health of Mali has announced that a case of Chikungunya has been confirmed by real-time polymerase chain reaction (RT-PCR) on 30 September 2023 in commune VI of the Bamako district. The case is a 35-year-old male resident of Kayes Liberté in the Kayes health district with onset of symptoms on 26 September 2023.

Mali

| Dengue | Grade 3 | 9/12/2023 | 8/31/2023 | 10/29/2023 | 494 | 62 | 1 | 0.00% |

On 9 September 2023, the Malian Ministry of Health reported a case of dengue in a 44-year-old female resident of Bacojiconi Golf, commune V, Bamako district. The case had onset of symptoms on 31 August 2023. On 9 September 2023, the sample collected from the case was confirmed positive for dengue virus by real-time polymerase chain reaction (RT-PCR) at the University Clinical Research Center (UCRC) laboratory. As of 29 October 2023, 494 suspected cases, including 62 confirmed cases and one death have been reported.

Mali

| Measles | Ungraded | 2/20/2018 | 1/1/2023 | 12/31/2023 | 780 | 354 | 0 | 0.00% |

From week 1 to week 52 of 2023, 780 suspected measles cases were laboratory tested in Mali, of which 354 were positive and 426 were negative. A total of 32 of the 75 health districts (42.7%) recorded at least one confirmed measles outbreak in 2023.

Mali

| Zika | Ungraded | 12/7/2023 | 12/10/2023 | 12/12/2023 | 12 | 0 | - | - |

The MoH confirmed 12 cases of Zika including two co-infections (Dengue-Zika) by the molecular biology and genomics laboratory of the University Clinical Research Center (UCRC). The samples come from the infectious and tropical diseases department of Point G hospital in Bamako. The cases came from Bamako and Koulikoro. The case investigation report will be shared by DSHP surveillance in due course.

Mauritania

| Diphtheria | Grade 2 | 10/26/2023 | 10/8/2023 | 10/19/2023 | 8 | 4 | 50.00% |

On 19 October 2023, the Mauritanian Ministry of Health reported suspected cases of diphtheria. The first case had onset of symptoms on 8 October 2023. A total of eight suspected cases, including four deaths, have been reported as of 29 October 2023.

Mauritania

| Measles | Ungraded | 3/7/2023 | 12/26/2023 | 9/17/2023 | 730 | 269 | 5 | 0.70% |

Mauritania has been experiencing a measles outbreak since early 2023. A total of 20 districts have reached the epidemic threshold, including four currently experiencing an outbreak (Kaidi, Ksar, Monguel et Rosso). As of 17 September 2023, the country has reported 730 suspected cases of measles (269 confirmed, including 173 laboratory-confirmed cases and 96 epidemiologically linked cases). Five deaths, including two community deaths, have been reported among confirmed cases.

Mauritania

| Rift Valley fever (RVF) | Ungraded | 11/27/2023 | 12/1/2023 | 12/1/2023 | 1 | 1 | 0 | 0.00% |

A case of Rift Valley fever confirmed on 23 November 2023 from the locality of Ejaré in Radhi municipality was reported in a 32-year-old male shepherd in Ejaré, Radhi. He developed symptoms including fever and epistaxis, consulted at Tintan Health Center where RVF was suspected.

Mozambique

| Humanitarian crisis in Cabo Delgado | Protracted | 1/2020 | 10/12/2023 | 8/6/2023 | - | - | - | - |

Most poor and very poor households in Mozambique face Minimal (IPC Phase 1) outcomes as the ongoing harvest improves food access and availability. In Cabo Delgado, ongoing humanitarian assistance drives Stressed (IPC Phase 2) outcomes, with Crisis (IPC Phase 3) outcomes persisting in conflict-affected areas. There have been a reduced number of attacks.

Mozambique

| Cholera | Grade 3 | 9/14/2022 | 10/12/2023 | 12/19/2023 | 38,793 | 38,793 | 153 | - |

The current cholera outbreak in the country started in Nassa province on 14 September 2022. As of 07 December 2023, 38,793 cholera cases have been recorded with 153 deaths (CFR 0.4%) in 11 affected provinces.

Mozambique

| Poliomyelitis (cVDPV2) | Grade 2 | 12/7/2018 | 1/1/2021 | 12/31/2023 | 6 | 6 | 0 | 0.00% |

According to the Global Polio Eradication Initiative, no case of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported this week. The number of cases in 2022 remains four. There were two cases reported in 2021. No cVDPV2 cases reported in 2023.

Mozambique

| Poliomyelitis (WPV1) | Grade 2 | 5/17/2022 | 5/18/2022 | 12/18/2023 | 8 | 8 | 0 | 0.00% |
A wild poliovirus type 1 (WPV1) was detected in Mozambique from samples collected in late March 2022 from Changara district in Tete province. This new WPV1 is an orphan virus and is linked to the virus detected in Malawi (for which outbreak response vaccinations are ongoing in Malawi and neighbouring countries). The patient, a 12-year-old female, had onset of paralysis on 25 March 2022. Her stool samples were collected on 1 April and 2 April 2022, and sent to the laboratory on 4 April 2022. According to the Global Polio Eradication Initiative, there were eight cases reported on 10 August 2022. As of 17 December 2023, there were no new cases reported for wild polio in Mozambique.

No new case of cVDPV2 was reported during this week. The total number of cases reported in 2022 is 16. There were 18 cases reported in 2021.

Currently, there is an ongoing outbreak of Dengue fever in Sokoto state, Nigeria, with 72 cases, including 14 laboratory-confirmed cases and zero deaths. Males represent 53% of all cases and the age group between 31 to 40 years old is more affected (43%).

Between week 19, 2022 and week 31, 2023, 4 160 suspected cases of diphtheria were reported from 27 states in Nigeria. Kano (3 233), Yobe (477), and Katsina (132) States have reported the most cases. A total of 157 deaths were recorded among confirmed cases (CFR 7.5%). Of suspected cases, 1 588 were laboratory-confirmed, 1 289 clinically compatible.

Between week 19, 2022 and week 31, 2023, 4 160 suspected cases of diphtheria were reported from 27 states in Nigeria. Kano (3 233), Yobe (477), and Katsina (132) States have reported the most cases. A total of 157 deaths were recorded among confirmed cases (CFR 7.5%). Of suspected cases, 1 588 were laboratory-confirmed, 1 289 clinically compatible.

No cVDPV2 case was reported during this week. The total number of cases reported in 2022 is 16. There were 18 cases reported in 2021.

Currently, there is an ongoing outbreak of Dengue fever in Sokoto state, Nigeria, with 72 cases, including 14 laboratory-confirmed cases and zero deaths. Males represent 53% of all cases and the age group between 31 to 40 years old is more affected (43%).

On 27 December 2023, the Institut Pasteur de Dakar (IPD) reported two cases of yellow fever positive by PCR from a research project. Both cases are male, one from the Saraya district and the other from the Kédougou district in the Kédougou region. The Saraya case is 9 years old, unvaccinated against yellow fever, with onset of symptoms on 30 November 2023 with fever and headache. The Kédougou case is 25 years old with unknown vaccination status. His symptoms included fever, headache, and chills. The sample was collected on 7 December 2023, one day after the onset of symptoms. He also tested IgM positive for Chikungunya. Neither case had jaundice. Investigations are ongoing.

In the Karamoja region of Uganda, it is anticipated that the food security situation will slightly improve in the projection period (September 2023 – February 2024), with the population in IPC Phase 3 or above reducing from 582,000 people (45%) to 342,000 (27%). About 48,000 people (4% of the population analysed) will be in IPC Phase 4 (Emergency) and 293,000 people (23% of the population analysed) will be in IPC Phase 3 (Crisis). The districts of Abim, Amudat, Kapeeka and Nakapiripirit are projected to improve from IPC Phase 3 (Stressed), whereas the rest will remain in IPC Phase 3 (Crisis) through the projection period.

This year, human Anthrax outbreaks have been reported in three districts: Kween district (5 cases, 3 confirmed and 0 death), Ibanda district (9 cases, 5 confirmed and 0 death) and Kyotera district (39 cases, 7 confirmed, 7 probable, 2 confirmed deaths and 8 suspected deaths). As of 7 December, only the Kyotera human anthrax outbreak is active. The figures have been reviewed.

Malaria upsurge is still ongoing in Uganda. During the last reporting period (week 44), a total of 223 316 cases and 33 deaths have been reported and three districts are now in outbreak (Serere, Amolatar and Kibuku). Figures have been updated.

On 1 December, WHO received a sitrep from the MoH reporting a measles outbreak in another district (Kyegegwa) with 68 cases including 64 probable, four confirmed cases and zero death. Cumulatively, a total of 147 measles cases including 18 confirmed and zero death are reported so far from two districts of Kinyanwanda and Kyegegwa. As of 7 December, only Kinyanwanda has an active outbreak.

Since week 1 through week 44 (ending 19 November 2023), about 182 rift valley fever (RVF) cases have been reported including 54 confirmed cases and 13 deaths from Kabale, Rubanda, Mbarara, Isingiro, Bushenyi, Nakasero, Kira, Lira and Kimumiro districts. As of 19 November, only Lira district is experiencing an active RVF outbreak with one case and zero death reported so far.

On 1 November 2023, WHO was notified of a human anthrax outbreak in Zambia. The first cases were recorded in the Sinazongwe district of Southern province in October 2022. Between 12 October 2022 and 20 November 2023, a total of 684 cases and 4 deaths (CFR 0.6%) were reported from nine provinces.

Zambia experienced a measles outbreak in the North Western province of the country. This is in a district that borders with DR Congo. A measles outbreak continued to evolve in Lusaka, North-western and Southern provinces affecting several districts. Cumulatively, the provinces had recorded 3 715 measles cases and 31 deaths as of 12 August 2023. As of 18 December 2023, 148 cases of measles were reported in 6 districts (Chitimba, Chingi, Samflya, Kanchibiy, Ikelieng, Kaputa) with 0 deaths.

As of 14 November 2023, there have been a total of 285 cases from Gokwe North and 127 cases from Gokwe South, in Midlands province of Zimbabwe. The outbreak began in week 1 of 2023 and is still ongoing.

The first cholera outbreak in the country in 2023 started on the 12 February 2023. Cumulatively there were 4 472 cholera cases with 125 deaths (CFR 2.8%) as of 2 October 2023. All of the ten provinces are affected with majority of the cases reported from Manicaland, Harare, Mash West and Mash Cent provinces.
