Overview

This Weekly Bulletin focuses on public health emergencies occurring in the WHO African region. This week’s articles cover:

- Cholera in Zambia
- Dengue in Mali
- Cyclone Belal in Mauritius

For each of these events, a brief description, followed by public health measures implemented and an interpretation of the situation is provided.

A table is provided at the end of the bulletin with information on all new and ongoing public health events currently being monitored in the region, as well as recent events that have been controlled and closed.

Major issues and challenges include:

- The cholera outbreak in Zambia, has escalated into a critical public health emergency, with the epidemic now affecting all ten of the nation’s provinces and urgently demanding an integrated response. This situation calls for an immediate, multidisciplinary strategy that includes rigorous surveillance, effective case management, and ensuring access to safe water, sanitation, and hygiene, complemented by robust community education efforts.

- Mali’s dengue outbreak continues primarily in Bamako. While cases decreased slightly in week 2 of 2024, the ongoing dengue fever outbreak coupled with a concurrent Zika outbreak still poses threat to the West African nation struggling with political turbulence. Insufficient laboratory and vector control equipment and supplies such as, fumigation machines, sampling kits, rapid diagnostic tests, mosquito nets are hampering the control of this outbreak. The Ministry of Health, with WHO and partners, is actively responding with surveillance, vector control, and community education, but resource limitations and the broader humanitarian crisis require increased support to control both diseases effectively.
**Zambia**

### Cholera

#### EVENT DESCRIPTION

The ongoing cholera outbreak in Zambia continues with over 400 new cases reported daily in the past six weeks. On 21 January 2024 alone, 449 cases with 18 deaths were recorded in Chipata, Kanyama, Matero, LMMUTH, Chilanga, Solwezi, Ndola, Shibuyuni and Itezhi Tezhi. There were 894 cases on admission with 419 discharged across all Cholera treatment centres (CTCs).

From October 2023 to date, nine provinces have reported cases of cholera with seven provinces confirming cholera outbreaks. A total of 53 districts have confirmed local transmission of cholera. Cumulative cases stand at 12,791 with 498 deaths (CFR 3.9%). Muchinga, Western and Luapula Provinces have recorded imported cases and have heightened surveillance at the border points. Lusaka district remains the epicentre of the outbreak, reporting the most cases, 11,602 (91%), followed by Central, 645 (5.0%), Southern, 164 (1.3%), and the Copperbelt, 126 (1.0%).

Among the 593 confirmed cases, 440 cases (74.0%) were confirmed positive through culture, while 153 (26.0%) were confirmed through PCR. Likewise, Lusaka Province has registered the highest number of confirmed cases, 424 (72%).

Lusaka province has the highest attack rate of 365.3 per 100 000 population, followed by Central with 27.3 per 100 000 population. Notably, the North Western and Southern provinces have recorded the highest fatality rates with a case fatality rate of 7.4% and 4.3% respectively.

#### PUBLIC HEALTH ACTIONS

To address the cholera outbreak, the country has initiated the following response measures.

- The National Coordinator of the Disaster Management and Mitigation Unit hosts a weekly meeting of the National Disaster Management Technical Committee to coordinate water, sanitation and resources being channelled to the response. Senior members of staff representing the different stakeholders including the line ministries, co-operating partners, Lusaka Water and Sewerage Company, Lusaka City Council, Disaster Management and Mitigation Unit, Defense Forces.

- The Honorable Minister of Health, hosts a daily media briefing to update the public on the statistics and the current status of the cholera response activity.

- The Government of Zambia continues to draw resources from its treasury to support the response, including the provision of clean and safe water, waste management, health promotion and clinical management.

- Vaccination campaign is currently underway targeting 1.5 million people, including children, health workers and people at high risk of infection in the worst affected areas. In partnership with Gavi, the Vaccine Alliance, UNICEF and others, WHO is supporting the government to effectively roll out the oral cholera vaccination campaign as well as bolster ongoing outbreak control measures.

- WHO is working with the government to strengthen the key outbreak response areas; emergency coordination, case management, surveillance, infection prevention and control, bolster water, sanitation and hygiene services as well as increase public awareness on the risks of the disease.

- Surveillance activities have been heightened in all provinces to enhance early detection and response to cases, and a strategy is underway to integrate all response activities.

- Water, sanitation, and hygiene intervention is ongoing, including chlorine distribution and water quality monitoring, disinfection, and inspections. Across Lusaka city, a total of 175 water tanks, over 300 water tanks, and over 20,000 pit latrines have been installed, supplied with water and emptied, respectively.

- Risk communication and community engagement is ongoing, and activities include, training community based volunteers on cholera risk communication in affected districts and door-to-door sensitization, radio shows, TV updates and interviews. A total of 1,213,847 (69%) of the target have been vaccinated, 2,917 healthcare workers and slightly more females 649,831 (54%) than males 564,016 (46%) have been vaccinated. The OCV teams identified three community cholera cases and referred them to CTCs.
SITUATION INTERPRETATION

The alarming spread of the current cholera outbreak in Zambia, has resulted in more than 50 districts grappling with the outbreak. A vaccination campaign is currently underway targeting 1.5 million people, including children, health workers and people at high risk of infection in the worst affected communities. WHO is working with the government to strengthen the key outbreak response areas; emergency coordination, case management, surveillance, infection prevention and control, bolster water, sanitation and hygiene services as well as increase public awareness on the risks of the disease. Sustaining collaboration with other line ministries and partners is crucial for reinforcing the effectiveness of responses and prepositioning essential commodities in other provinces is suggested to ensure preparedness for potential outbreaks in diverse regions.
Dengue Fever

**EVENT DESCRIPTION**

The dengue fever outbreak in Mali continues. Since our last report as of 12 November 2023 (Weekly Bulletin 45 of 2023), 2,771 new suspected cases including 28 new deaths, and 479 additional laboratory-confirmed cases have been reported. During epidemiological week 2 of 2024 (ending 14 January 2024), 149 suspected cases with no death and 18 laboratory-confirmed cases were reported. There was an 8.6% and a 52.6% decrease respectively in the number of suspected and confirmed cases reported in week 2 compared to the previous week when 163 suspected cases with no death and 38 laboratory-confirmed cases were reported.

From 9 September 2023, when the first case was confirmed to 14 January 2024, a cumulative total of 5,681 suspected cases were reported, including 864 laboratory-confirmed and 34 deaths (case fatality ratio 0.6%). Serotyping was conducted on 31 samples, and dengue virus (DENV) serotypes 1 and 3 were identified in 10 and 18 samples respectively, while evidence of co-infection DENV1+3 was reported in three samples.

Twenty out of 75 health districts across six regions (Kayes, Koulikouro, Sikasso, Ségou, Mopti, Bamako) have reported confirmed cases, with the majority reported from Bamako city (714; 82.6%). The mean age of the confirmed cases is 37.42 ± 18.23 years, with the most affected age-group being 25-29 years (120; 13.9%). The majority of confirmed cases are male (466; 53.9%).

Mali is also facing a concurrent zika virus outbreak with a total of 22 confirmed cases with no death reported from Koulikoro, Sikasso and Bamako District as of 14 January 2024.

**PUBLIC HEALTH ACTIONS**

- Weekly coordination meetings continue to be held under the leadership of the Ministry of Health, with the support and active participation of WHO and other partners.
- Multidisciplinary teams composed of epidemiologists, entomologists, laboratory technicians, and other professionals have been deployed to the affected districts to conduct epidemiological and entomological investigations and active case search; epidemiological surveillance at points of entry has also been strengthened.
- Community sensitization on dengue preventive measures is ongoing.
- Elimination of breeding sites, fumigation in public places and indoor spraying are being conducted in the affected areas.
- Laboratory PCR testing is being conducted in reference laboratories within Mali; National Institute of Public Health of, University Clinical Research Center of, Laboratory of Applied Molecular Biology of, and Charles Mérieux Center for Infectious Disease.
- Procurement of case management, laboratory and vector control equipment and supplies is ongoing with the support of partners (WHO, MSF, etc): 5,000 dengue rapid diagnostic tests, 250 EDTA tubes, 120 sprayers, 50 fumigation machines, 6,006 zinc phosphate sachets, 94,995 dichlofort bottles, among others have been received since the beginning of 2024.

**SITUATION INTERPRETATION**

Mali is one of the 15 countries in the WHO African region that are currently affected by the multi-country outbreak of dengue. These outbreaks highlight the need to strengthen efforts for dengue prevention, preparedness and readiness in the Region, including cross-border collaboration between the affected countries. The dengue outbreak in Mali occurs in the context of a protracted humanitarian crisis that is stretching human, material and financial resources available to respond to other emergencies. Although the Ministry of Health of Mali, with the support of partners, is working tirelessly to control the outbreak, more efforts need be made to mobilize funds to adequately implement the required response activities (epidemiological and entomological surveillance, risk communication and community mobilization, household distribution of insecticide-treated mosquito nets).
Distribution of confirmed cases and deaths of Dengue in Mali by region, as of 14 January 2024

Cyclone Belal

EVENT DESCRIPTION

Tropical Cyclone Belal hit Mauritius on 15 January 2024, affecting 100 000 people, causing two deaths, and leading to significant infrastructure damage and loss of many vehicles, of which actual account is still ongoing.

A cyclone warning class III was issued in Mauritius on 15 January 2024 and lifted on 16 January 2024, when the public was advised to maintain all precautions and stay in a safe place.

On 15 January 2024, the Tropical Cyclone Belal was centred at about 110 km to the south west of Le Morne near latitude 21.4 degrees south and longitude 56.7 degrees east. Cyclone Belal was expected to pass at about 90km at its closest distance to the south of the country early morning of 16 January 2024, and as of 17 January 2024, the cyclone was moving between east-to-east, south-east at a speed of about 14 km/h.

In Port-Louis, the capital of Mauritius, floods made roads impassable, prompting the evacuation of over 1 000 people and power outages in 40 000 households. The highest gusts were recorded on 15 January 2024 in four districts of Moka, Grand Port, Riviere Noir and Savanne. In Savanne district alone, three areas recorded highest gusts including the Grand Bassin (112 km/h), Riviere des Anguilles (104 km/h), and St Felix (115 km/h). Other affected areas were Nouvelle Decouverte (122 km/h) in Moka district, Plaisance (91 km/h) in Grand Port district, and Riviere Noire (79 km/h) district.

Cyclone Belal remains a dangerous threat to Mauritius since active cloud bands associated with Belal are still crossing the island nation bringing rain and gusts, posing a threat of continued cyclonic conditions and influence over weather. Consequently, the weather will be overcast with heavy intermittent rain and thunderstorm which will become more frequent that may cause water accumulations and flooding in several places. Wind blowing from the north northwest at a speed of about 65 km/h with gust of the order of 130 km/h may cause phenomenal sea swells of 8 to 10 metres beyond the reefs which may cause storm surge and coastal inundation to the north, west and south.

PUBLIC HEALTH ACTIONS

- Communication has been strengthened at local and national level to issue official information on the cyclone Bilal through a “safety bulletin” by the Mauritius Meteorological Services.
- Trauma kits and supplies for potential increase of diarrheal diseases have been prepositioned for distribution by the Ministry of Health.
- Situation and risk analysis is ongoing by the ministry of Health and national authorities are assessing the damage after Cyclone Belal brought torrential rain and flooding to the Indian Ocean Island nation.
- Disaster management teams are on alert and will be monitoring routes that are prone to weather-related incidents. A full assessment of the main roads and critical infrastructure is ongoing.
- The general public has been strictly advised not to go out at sea and to avoid venturing along beaches due to the potential for storm surges.

SITUATION INTERPRETATION

Cyclones are seasonal in Mauritius and it is the centre of a cyclone only every 5 years, although every year the island is hit by the remnants of three to five storms. Cyclone Belal has left a significant humanitarian footprint on Mauritius. While immediate response actions are crucial, long-term recovery and resilience-building measures are necessary to ensure the well-being of affected communities and their ability to withstand future disasters. There are no longer any risks of having cyclonic conditions over Mauritius, but other environmental risks exist.
Snapshot of Cyclone Belal crisis in Mauritius, as at 19 January 2024

### New Events

**Democratic Republic of the Congo**
- **Event**: Anthrax
- **Grade**: Grade 2
- **Date notified to WCO**: 1/17/2024
- **Start of reporting period**: 11/15/2023
- **End of reporting period**: 11/15/2023
- **Total cases**: 5
- **Cases Confirmed**: 1
- **Deaths**: 2
- **CFR**: 40.00%

A human case of anthrax was confirmed on 15 November 2023 in Lume health area, Mutwanga health district, Beni territory, North Kivu Province. At that time, 5 suspected cases including 2 deaths were reported. In December 2023, suspected anthrax cases were reported in another health district of Beni, Mangina. Investigations are ongoing.

**Mauritius**
- **Event**: Cyclone
- **Grade**: Ungraded
- **Date notified to WCO**: 1/15/2024
- **Start of reporting period**: 1/15/2024
- **End of reporting period**: 1/22/2024
- **Total cases**: 100,000
- **Cases Confirmed**: 100,000
- **Deaths**: 2
- **CFR**: 0.00%

Tropical Cyclone Belal hit Mauritius on 15 January, causing two deaths, affecting 100,000 people, and leading to significant infrastructure damage and 100s of vehicle losses. In Port-Louis, floods made roads impassable, prompting the evacuation of over 1,000 people and power outages in 40,000 households.

**South Africa**
- **Event**: Cholera
- **Grade**: Grade 3
- **Date notified to WCO**: 1/20/2024
- **Start of reporting period**: 1/22/2024
- **End of reporting period**: 1/22/2024
- **Total cases**: 2
- **Cases Confirmed**: 2
- **Deaths**: 0
- **CFR**: 0.00%

A cholera outbreak was reported in South Africa on 15 January 2024, with two imported cases of toxigenic Vibrio cholerae O1 Ogawa confirmed by PCR. The first case involved a 43-year-old Zimbabwean male who recovered after hospital treatment. The second case was a 27-year-old Zimbabwean male who had traveled to Zimbabwe in December 2023 and returned to South Africa in January 2024, testing positive for cholera with symptoms of diarrhoea, cramps, and vomiting starting from 11 January 2024.

### Ongoing Events

**Benin**
- **Event**: Dengue fever
- **Grade**: Grade 3
- **Date notified to WCO**: 1/1/2024
- **Start of reporting period**: 1/1/2024
- **End of reporting period**: 1/1/2024
- **Total cases**: 6
- **Cases Confirmed**: 3
- **Deaths**: 1
- **CFR**: 16.70%

As of 20 December 2023, Benin reported six cases of dengue fever, including three confirmed cases and one death. Confirmed cases were reported from Littoral (n=2) and Couffo (n=1).

**Burkina Faso**
- **Event**: Humanitarian crisis (Sahel Region)
- **Grade**: Grade 2
- **Date notified to WCO**: 1/1/2019
- **Start of reporting period**: 1/1/2019
- **End of reporting period**: 11/27/2023
- **Total cases**: 5,500,000
- **Cases Confirmed**: 5,500,000
- **Deaths**: -
- **CFR**: -

Since 2015, the security situation in the Sahel and Eastern Burkina Faso has gradually deteriorated due to attacks by armed groups. Access to healthcare services remains a major challenge for the affected population. As of November 2023, 5.5 million People were in need of humanitarian assistance, 3.2 million of which are children and over 2.06 million IDPs registered. The situation remains fluid.

**Burkina Faso**
- **Event**: Chikungunya
- **Grade**: Ungraded
- **Date notified to WCO**: 9/6/2023
- **Start of reporting period**: 9/19/2023
- **End of reporting period**: 1/7/2024
- **Total cases**: 311
- **Cases Confirmed**: 311
- **Deaths**: 0
- **CFR**: 0.00%

On 6 September 2023, the reference laboratory for viral hemorrhagic fevers confirmed a case of chikungunya in a patient from the Pouytenga health district whose sample was collected as part of sentinel surveillance for dengue and other arboviruses. As of 7 January 2024, 311 confirmed cases and no deaths were reported from six health districts: Pouytenga (274, 88%), Ouagadougou (23), Zorgho (8), Koudougou (4), and Bobo Dioulasso (2). No new confirmed cases were reported during week 1 of 2024.

**Burkina Faso**
- **Event**: Dengue
- **Grade**: Grade 3
- **Date notified to WCO**: 9/11/2023
- **Start of reporting period**: 1/1/2023
- **End of reporting period**: 12/18/2023
- **Total cases**: 146,878
- **Cases Confirmed**: 68,346
- **Deaths**: 688
- **CFR**: 0.50%

From the beginning of the outbreak in January 2023 to 18 December 2023, a total of 146,878 suspected cases have been documented, with 68,346 confirmed cases and 688 fatalities.

**Burundi**
- **Event**: Cholera
- **Grade**: Grade 3
- **Date notified to WCO**: 1/1/2023
- **Start of reporting period**: 1/1/2023
- **End of reporting period**: 1/1/2023
- **Total cases**: 1,382
- **Cases Confirmed**: 175
- **Deaths**: 9
- **CFR**: 0.70%

The ongoing cholera outbreak was officially declared on 1 January 2023. Cumulatively, a total of 1,382 cases with nine deaths have been reported as of 7 January 2024.

**Burundi**
- **Event**: Poliomyelitis (cVDPV2)
- **Grade**: Grade 2
- **Date notified to WCO**: 3/17/2023
- **Start of reporting period**: 1/1/2022
- **End of reporting period**: 1/10/2024
- **Total cases**: 2
- **Cases Confirmed**: 2
- **Deaths**: -
- **CFR**: -

No cVDPV2 case was reported this week. There is one case reported in 2023 and one in 2022.

**Cameroon**
- **Event**: Humanitarian crisis (North-West & South-West )
- **Grade**: Protracted
- **Date notified to WCO**: 10/1/2016
- **Start of reporting period**: 6/27/2018
- **End of reporting period**: 11/15/2023
- **Total cases**: -
- **Cases Confirmed**: -
- **Deaths**: -
- **CFR**: -

In the North-West and South-West regions, the unstable security situation and persistent violence are exacerbating humanitarian needs. Affected people continue to flee their homes to neighboring villages and communities. Between January and July 2023, humanitarian and security partners reported the displacement of more than 42 000 people in both regions.

**Cameroon**
- **Event**: Humanitarian crisis (Sahel Region)
- **Grade**: Grade 2
- **Date notified to WCO**: 12/31/2013
- **Start of reporting period**: 6/27/2017
- **End of reporting period**: 11/13/2023
- **Total cases**: -
- **Cases Confirmed**: -
- **Deaths**: -
- **CFR**: -

No new cases have been reported this week. There is one region currently being monitored for humanitarian crisis.
The Far North region of Cameroon is still facing humanitarian crisis. The region situated at the border area with Nigeria and Chad, as well as the Lake Chad area, remain the most affected by the armed conflict. Between August and September this year, nearly 6,000 newly displaced people were registered in the Mokolo district following repeated attacks by non-state armed groups. More than 2,200 new asylum seekers/refugees were registered for the same period at the Gourenguel transit site, in Mokolo district of Mayo-Tsanaga department.

From week 1 through week 48 (ending 3 December 2023), 6,535 confirmed measles cases have been reported in Cameroon, including 476 IgM+ and 6,059 epidemiologically linked. At least 51 related deaths (CFR 0.5%) have been reported in 2023.

From 1 January to 30 November 2023, 113 suspected cases of Mpx, including 27 laboratory-confirmed and no deaths have been reported. In 2022, 18 confirmed cases and three deaths were reported in the country.

No cVDPV2 cases were reported this week. There were three cases reported in 2022, three others reported in 2021, and seven cases reported in 2020.

Between weeks 35 and 45 of 2023, Cameroon recorded eight PCR-positive cases of yellow fever. This is in addition to 51 cases that tested positive by plaque reduction neutralization test (PRNT) between weeks 4 and 45 of 2023. Of the 59 PCR- and PRNT-positive cases, 30 were classified as confirmed cases, including 19 reportedly unvaccinated against yellow fever. These cases were reported from 48 health districts in the Central, Littoral, South, West, East, North-West, South-West, North, Adamawa and Far-North regions. Only two cases benefited from in-depth investigation with entomological investigation.

On 6 November 2023, the Ministry of Health Surveillance Service reported two confirmed cases of Dengue through Polymerase Chain Reaction (PCR) testing and one borderline case in the city of Praia, Santiago Island, Cabo Verde. The same day three more suspected cases were reported from the Central Hospital Dr. Agostinho Neto giving a total of six cases including two confirmed with zero death. As of 19 December 2023, a total of 410 suspected cases, including 193 confirmed cases and no deaths, were reported.

At the end of epi-week 47, 2023, the country recorded 3,027 suspected cases and 4 deaths. Since the start of 2023, 15 out of 35 health districts (43%) experienced measles outbreak.

From 4 March 2022 to 26 November 2023, 35 confirmed cases of Mpx and one death have been reported in the country. Since the start of 2023, the country has reported 18 laboratory-confirmed cases, including one death.

A total of 14 cases have been reported in the country in 2023. In addition, six cases were reported in 2022. Although no new cases were reported in 2021, four cVDPV2 cases were reported in 2020 and 21 cases in 2019 from several outbreaks. The number of confirmed cases reported in 2023 was revised to 14 so far.

There is an ongoing yellow fever outbreak in the Central African Republic. In 2023, from week 1 through week 47 (ending 26 November ), five confirmed cases of yellow fever were recorded for the following districts: Sangha-Mbaéré (1), Berberati (1), Bambari (2), and Bossembélé (1). The number of the confirmed cases this year has been reviewed.

With the ongoing Sudanese crisis, over 570,000 Sudanese and Chadian people fled Darfur to converge to the eastern entry points of Chad. Chad is the most affected country by the crisis in Sudan as it hosts 49.6% of Sudanese refugees, with thousands of new arrivals every week. These refugees live in numerous formal and informal camps located in 11 health districts across four provinces (Ennedi East, Ouaddai, Sila and Wadi Fira).

As of Week 49 of 2023 (ending 10 December), 10,552 suspected cases and eight measles-related deaths (CFR 0.1%) were reported in Chad. A total of 820 samples tested IgM positive for measles and 178 tested IgG+ for rubella.
One cVDPV2 case was reported this week, bringing the total number of cases this year to 45. This latest reported case had onset of paralysis on 15 September, from Salamat region of Chad. 44 cVDPV2 cases were reported in 2022, 106 cVDPV2 cases were reported in 2020 from three different outbreaks and nine others were reported in 2019.

| Comoros | Rift Valley Fever suspected | Ungraded | 1/12/2024 | 1/12/2024 | 1/12/2024 | 471 | 9 | 1.90% |

An unusual disease outbreak began in the Comoros around late October 2023. 471 suspected cases hospitalized distributed between Ngazidja and Moïli, in nine health districts. Symptoms included flu-like illness and gastroenteritis; 2% had meningoencephalitis, epistaxis, and petechiae. 16 blood samples were taken from these cases for biological analyses and lab results ruled out dengue, Rift Valley fever, influenza, and COVID-19. Mohéli Island also reports cattle and goat deaths. As of January 5, 2024, four samples (3 cattle, 1 human) tested positive for past RVF infection but negative for IgM. Further investigation continues.

| Congo | Floods | Ungraded | 1/1/2024 | 1/4/2024 | 1/7/2024 | 320,891 | 320,891 | 17 | 0.00% |

This crisis is attributed to a consistent increase in rainfall over the last two months of 2023, which caused the Congo River’s water level to rise by 30 cm. As of week 1 of 2023, an estimated 320,891 individuals were directly impacted by the floods. There have been 17 deaths reported across Likouala, Plateaux, Brazzaville, and Pointe-Noire, along with 6 people reported missing in Likouala and the Cuvette regions. A total of 361 villages and 36 neighborhoods experienced either complete or partial flooding with 2,292 hectares of farmland inundated. Residential structures have been severely affected, leading to widespread destruction of homes and the flooding of administrative buildings. Additionally, the flooding has contaminated local drinking water sources.

Congo Mxop Protracted 2 5/23/2022 8/22/2023 11/27/2023 26 21 5 19.20% From 22 August to 27 November 2023, 21 laboratory-confirmed cases of Mpox, 5 probable cases and 5 deaths were reported.

| Congo | Poliomyelitis (cVDPV1) | Grade 2 | 3/21/2023 | 3/1/2023 | 12/13/2023 | 1 | 1 | - | - |

No Circulating vaccine-derived poliovirus type 1 (cVDPV1) cases were reported this week. As of 6 December 2023, only one case reported this year.

Côte d’Ivoire Dengue Grade 3 7/10/2023 6/19/2023 12/23/2023 3,985 321 27 0.70% An outbreak of Dengue fever is ongoing in Ivory Coast. A total of 3895 cases have been reported from 19 June to 3 December 2023, with 321 confirmed cases and 27 deaths (CFR: 0.8%).

Democratic Republic of the Congo Floods Ungraded 1/9/2024 1/9/2024 1/9/2024 43,750 43,750 300 Severe floods in the Democratic Republic of Congo for many weeks have caused catastrophic impacts across multiple regions. Some of the most affected areas are Ituri and Mongala provinces as well as the capital Kinshasa. As of 5 January 2024, the Minister of Social Affairs, Humanitarian Actions and National Solidarity announced that at least 300 people have died due to the floods and over 43,750 houses destroyed.

Democratic Republic of the Congo Humanitarian crisis Grade 3 12/20/2016 4/17/2017 12/9/2023 - - - - In the latest reporting week (week 49), the humanitarian situation in the Democratic Republic of the Congo (DRC) was marked by flooding in several localities of the Tshopo province with 97,516 people affected so far, including 71,388 internally displaced persons (IDPs). There was an arrival in week 48 of 2,135 new IDPs in the provinces of Tshopo (1,104) and South Kivu (1,031) fleeing violations in their respective localities.

Democratic Republic of the Congo Cholera Grade 3 1/16/2015 1/1/2023 11/12/2023 62,803 1,866 715 1.10% As of 12 November 2023, the country had reported 62,803 cumulative cases, with 715 deaths (CFR 1.1%) across 12 affected provinces.

Democratic Republic of the Congo Measles Ungraded 10/12/2021 1/1/2023 12/10/2023 305,404 7,214 5,684 1.90% A total of 305,404 suspected measles cases and 5,684 deaths have been reported from week 1 through week 49 (ending 10 December), 2023. About 77% of these suspected cases are children under five years of age. Among the suspected cases reported, 7,214 were investigated through the case based surveillance system and 3,980 were IgM positive for measles, while 663 were IgM positive for rubella.

Democratic Republic of the Congo Mxop Protracted 2 3/30/2019 1/1/2023 12/3/2023 13,357 714 607 - In The Democratic Republic of the Congo, this year, from January to 3 December 2023, a total of 714 confirmed cases are reported out of 13,357 suspected cases and 607 related deaths.

Democratic Republic of the Congo Poliomyelitis (cVDPV1) Grade 2 8/27/2022 8/27/2022 1/3/2024 247 247 0.00% As per the Global Polio Eradication Initiative (GPEI), two cVDPV1 cases were reported this week in Tanzania bringing the number of cases to 97 last year and 150 in 2022.

Democratic Republic of the Congo Poliomyelitis (cVDPV2) Grade 2 2/26/2021 1/1/2022 1/3/2024 489 489 0.00% As per the Global Polio Eradication Initiative (GPEI), one cVDPV2 case was reported this week in Haut Lomami. There have been 117 cases in 2023 and 372 in 2022.

Eritrea Poliomyelitis (cVDPV2) Grade 2 6/2/2022 6/7/2022 12/15/2023 2 2 0.00% No new case of cVDPV2 in 2023 as at week 50. One case was reported in 2022, and another one reported in 2021. The latter case was confirmed on 2 June 2022 by the Ethiopian National Polio Laboratory.

Ethiopia Floods Ungraded 11/8/2023 11/2/2023 12/13/2023 - - - -
Heavy rains, flash, and river floods have caused flood emergency affecting more than 56 woredas in five regions affecting over 1 431 347 people and displaced over 682 197 people and resulted in the deaths of 44 people, mostly from Somali region.

A cholera outbreak is ongoing in Kenya since 26 October 2022. As of 17 January 2023, a total of 12,432 cases, with 577 confirmed by culture, and 206 deaths (CFR 1.7%) have been reported in 27 affected Counties.

---

**Kenya**

**Leptospirosis (visceral)**

| Ungraded | 3/31/2019 | 1/3/2020 | 12/18/2023 | 2,395 | 2,205 | 10 | 0.40% |

Since January 2020, a total of 2,395 visceral leptospirosis confirmed and suspected cases with 10 deaths (CFR 0.5%), have been reported in nine counties namely: Marsabit, Garissa, Kitui, Baringo, West Pokot, Mandera, Wajir, Marsabit, and Isiolo. The outbreak is active in West Pokot County. No new cases were reported as of 17 December 2023.

**Measles**

| Ungraded | 6/29/2022 | 1/1/2023 | 10/22/2023 | 1,325 | 256 | 23 | 1.70% |

The outbreak has been continuous since 2022, affecting 13 counties in 2023. Cumulatively, 1,325 cases, with 256 confirmed cases and 23 deaths (CFR 1.7%). No new cases have been reported as of 17 December 2023.

---

**Kenya**

**Poliomyelitis (cVDPV2)**

| Grade 2 | 7/6/2023 | 5/26/2023 | 1/10/2024 | 13 | 13 | 0.00% |

According to Global Polio Eradication Initiative, no cVDPV2 cases were reported this week. There have been eight cases reported in 2023.

**Rift Valley Fever (RVF)**

| Ungraded | 1/24/2024 | 1/25/2024 | 1/25/2024 | 13 | 1 | 0 | 0.00% |

Between 9 and 19 January, 2024, Marsabit County Referral Hospital reported 13 suspected cases of Rift Valley Fever (RVF). CDC lab tests in Nairobi confirmed one positive case on 18 January from a 38-year-old woman in Marsabit County. This coincides with reports of animal deaths in Marsabit and Wajir Counties, suggesting a possible outbreak in these areas prior to the confirmed human case.

---

**Liberia**

**Fuel Tanker Explosion**

| Ungraded | 12/29/2023 | 1/2/2024 | 1/2/2024 | 94 | 94 | 51 | 54.30% |

In the late afternoon of 26 December 2023, a fuel tanker veered of the road and crashed on the Monrovia-Gbarnga highway. The accident occurred in Totota. After the accident, several persons went to the accident site and others started to scoop fuel from the capsized tanker. As of 29 December, 94 cases have been recorded with an estimated 51 deaths. Response is still ongoing according to WCO.

**Lassa Fever**

| Ungraded | 3/3/2022 | 1/6/2022 | 10/30/2023 | 353 | 96 | 27 | 7.60% |

From January 6, 2022, to week 42 of 2023, a cumulative total of 353 cases have been reported with 96 confirmed and 27 deaths (CFR 7.9%).

**Measles**

| Ungraded | 2/3/2022 | 12/13/2021 | 10/30/2023 | 12,967 | 12,298 | 95 | 0.70% |

Since the measles outbreak started on 13 December 2021, there have been 12,967 suspected cases, 12,298 confirmed cases, and 95 deaths with CFR 0.7% in 15 affected Counties as of week 42 of 2023. Montserrado County has recorded the highest number of deaths (69).

**Liberia**

**Mpox**

| Protracted 2 | 7/21/2023 | 7/22/2023 | 12/18/2023 | 119 | 7 | 0.00% |

Liberia confirmed its first case of Mopx on 23 July 2022, with a cumulative total of 119 suspected cases reported and 7 confirmed. The most recent case was in week 42 of 2023 in Grand Kru and Nimba counties.

---

**Madagascar**

**Malnutrition crisis**

| Protracted 2 | 7/1/2021 | 1/1/2021 | 1/17/2024 | 3,900,000 | 3,900,000 | - | - |

In the Grand Sud, malnutrition has stabilized due to increased humanitarian aid and good rainfall from January to June 2023. Drought conditions improved in June 2023 compared to the previous two months owing to increased rainfall. However, the situation remains fragile: 3.9 million people are in need, with four of 11 districts in Crisis phase (IPC 3) until September, affecting 575,470 severely food-insecure individuals. A worsening of food security is anticipated from January 2024, mainly due to El Niño effect.

**Anthrax**

| Grade 2 | 11/27/2023 | 11/28/2023 | 11/28/2023 | 1 | 1 | 0.00% |

On 27 November 2023, a case of human cutaneous anthrax was confirmed from Mzimba district, northern Malawi in a 6-year-old female, no death reported so far.

**Cholera**

| Grade 3 | 3/3/2022 | 3/3/2022 | 1/1/2024 | 59,125 | 59,125 | 1,771 | 3.00% |

Twenty-nine districts have reported Cholera cases since March 2022 in the Machinga district. As of 17 January 2024, a cumulative total of 59,125 cases and 1,771 deaths (CFR 3.0%) have been reported since the onset of the outbreak.

**Measles**

On 6 November 2023, the Ministry of Health released a press statement on confirmed measles outbreak in Lilongwe district following the notification of 11 laboratory confirmed cases within the same geographical area 36. As of 6 November, 32 suspected cases including 11 confirmed are reported. Two suspected measles related deaths were also reported.

**Poliomyelitis (WPV1)**

| Grade 2 | 1/31/2022 | 2/1/2022 | 1/31/2022 | 1 | 1 | 0.00% |

One positive case of wild WPV1 was detected in Lilongwe from a child with the date of onset of paralysis on 19 November 2021. As of December 18 2023, there were 12 cases in 9 districts of Malawi. No other cases have been reported. Malawi continues participating in the multi-country, subregional outbreak response to control the WPV1 outbreak.

---

**Mali**

**Humanitarian crisis (Sahel region)**

| Grade 2 | 9/11/2017 | 12/19/2023 | 7,500,000 | 7,500,000 | 0.00% |

Mali is facing prolonged conflict, poverty, climate shocks, and growing insecurity. However, the current Humanitarian Response Plan for Mali is severely underfunded, with only 11% of the required funding secured. There has been a significant increase in IDPs in the regions of Kidal (32.8%) and Ménaka (20%). As of week 50 , over 7.5 million people are in need of humanitarian assistance.

**Dengue**

| Grade 3 | 9/12/2023 | 8/31/2023 | 1/7/2024 | 5,532 | 846 | 34 | 0.60% |

On 9 September 2023, the Malian Ministry of Health reported a case of dengue in a 44-year-old female resident of Bacoïdjoroni Golf, commune V, Bamako district. The case had onset of symptoms on 31 August 2023. On 9 September 2023, the sample collected from the case was confirmed positive for dengue virus by real-time polymerase chain reaction (RT-PCR) at the University Clinical Research Center (UCRC) laboratory. As of 7 January 2024, 5,532 suspected cases, including 846 confirmed cases and 34 deaths have been reported.

From week 1 to week 52 of 2023, 780 suspected measles cases were laboratory tested in Mali, of which 354 were positive and 426 were negative. A total of 32 of the 75 health districts (42.7%) recorded at least one confirmed measles outbreak in 2023.

On 6 December 2023, the Ministry of Health of Mali reported 12 cases and zero deaths of Zika virus disease confirmed by real time polymerase chain reaction (RT-PCR) at the Molecular and Genomic Biology Laboratory of the University Center for Clinical Research (UCRC) at Point G. Three cases were confirmed on 1 December 2023 and nine cases on 4 December 2023. As of 24 December 2023, a total of 22 confirmed cases and zero deaths were reported from 10 health districts in Koulikoro region (9), Sikasso region (1), and Bamako district (12).

On 19 October 2023, the Mauritanian Ministry of Health reported suspected cases of diphtheria. The first case had onset of symptoms on 8 October 2023. A total of eight suspected cases, including four deaths, have been reported as of 29 October 2023.

On 19 October 2023, Mauritanian has experienced a measles outbreak since early 2023. As of 31 December 2023, the country has reported 988 suspected cases of measles, including 161 laboratory-confirmed cases and six deaths.

A case of Rift Valley fever confirmed on 23 November 2023 from the locality of Ejare in Radhi municipality was reported in a 32-year-old male shepherd in Ejare, Radhi. He developed symptoms including fever and epistaxis, consulted at Tintan Health Center where RVF was suspected.

Since January 1, 2024, the country has recorded nearly thirty cases of dengue. With the recent rains that have fallen on Mauritius, this situation could worsen, according to the Ministry of Health. Currently, the country has about 15 active cases, most of which are those residing in the north of the country. Following the torrential rains caused by Belai at the beginning of last week, a meeting was held to organize to prevent the spread of these tiger mosquitoes that spread the outbreak.

Most poor and very poor households in Mozambique face Minimal (IPC Phase 1) outcomes as the ongoing harvest improves food access and availability. In Cabo Delgado, ongoing humanitarian assistance drives Stressed (IPC Phase 2) outcomes, with Crisis (IPC Phase 3) outcomes persisting in conflict-affected areas. There have been a reduced number of attacks.

The current cholera outbreak in the country started in Niassa province on 14 September 2022. As of 07 December 2023, 38,793 cholera cases have been recorded with 153 deaths (CRF 0.4%) in 11 affected provinces.

One cVDPV1 case was reported in Zambezia bringing the number of 2023 cases to four.

According to the Global Polio Eradication Initiative report for 10 January 2024, No case of circulating vaccine-derived poliovirus type 2 (cVDPV2) has been reported in 2024. One case was reported in 2023. The number of cases in 2022 remains four. There were two cases reported in 2021.

A wild poliovirus type 1 (WPV1) was detected in Mozambique from samples collected in late March 2022 from Changara district in Tete province. This new WPV1 is an orphan virus and is linked to the virus detected in Malawi (for which outbreak response vaccinations are ongoing in Malawi and neighbouring countries). The patient, a 12-year old female, had onset of paralysis on 25 March 2022. Her stool samples were collected on 1 April and 2 April 2022, and sent to the laboratory on 4 April 2022. According to the Global Polio Eradication Initiative, there were eight cases reported on 10 August 2022. As of 17 December 2023, there were no new cases reported for wild polio in Mozambique.

The number of internally displaced people in Niger has reached a record high, with an increase from 1.9 million in 2017 to 4.3 million individuals (15% population) in 2023, indicating a significant rise in the need for humanitarian assistance. On 28 July, Niger experienced a military coup and this marks the third Sahel country in less than three years.

The number of internally displaced people in Niger has reached a record high, with an increase from 1.9 million in 2017 to 4.3 million individuals (15% population) in 2023, indicating a significant rise in the need for humanitarian assistance. On 28 July, Niger experienced a military coup and this marks the third Sahel country in less than three years.

As of epidemiological week 41, 2023, 1,802 suspected measles cases were laboratory tested in Mali, of which 354 were positive and 426 were negative. A total of 32 of the 75 health districts (42.7%) recorded at least one confirmed measles outbreak in 2023.
A meningitis outbreak was declared in the Dungass health district in Zinder region. The first case was reported on 31 October 2022 and confirmed on 23 November 2022, with Neisseria meningitidis identified as the causative agent. As of 16 October 2023, 2,261 suspected cases of meningitis, including 736 laboratory-confirmed cases and 128 deaths (CFR 5.7%) were reported.

No new case of cVDPV2 was reported during this week. The total number of cases reported in 2022 is 16. There were 18 cases reported in 2021.

People face emergency levels of food insecurity, with very high rates of severe acute malnutrition that could lead to death in Borno, Adamawa and Yobe states. As of week 50, 2023, over 6 million people are targeted for humanitarian aid, 8.3 million people are in need of humanitarian assistance, 2.2 million IDPs, and 4.3 million people in need of food security aid.

From 1 January to 11 November 2023, a cumulative total of 3,441 suspected cholera cases and 108 deaths (CFR 3.1%) were reported in Nigeria.

Currently, there is an ongoing outbreak of Dengue fever in Sokoto state, Nigeria, with 72 cases, including 14 laboratory-confirmed cases and zero deaths. Males represent 53% of all cases and the age group between 31 to 40 years old is more affected (43%).

Between week 19, 2022 and week 52, 2023, 22,293 suspected cases of diphtheria were reported from 36 states in Nigeria. Kano (14,126), Yobe (2,238), Katsina (1,734), Bauchi (1,376), Borno (1,148), Kaduna (573) and Jigawa (256) accounted for 96.2% of reported suspected cases. Of the 22,293 suspected cases reported, 13,387 (60.1%) were confirmed, including 346 laboratory-confirmed, 510 epidemiologically linked, and 12,531 clinically compatible cases. The majority (9,048; 67.6%) of the confirmed cases were in children aged 1-14 years. Only 3,376 (25.2%) of the 13,387 confirmed cases were fully vaccinated with a diphtheria toxoid-containing vaccine. A total of 598 deaths (CFR: 4.5%) were recorded among the confirmed cases.

As of week 3 of 2024, 892 suspected cases, including 211 laboratory-confirmed cases, were reported, with 43 reported deaths among confirmed cases, resulting in a CFR of 20.4%. Confirmed cases, including four HCWs, were reported from 17 states and 54 LGAs, with the highest number of cases (91.5%) reported from Ondo (53 cases, five deaths), Edo (52 cases, 8 deaths), Bauchi (48 cases, 15 deaths), and Benue (17 cases, three deaths) states.

No cVDPV2 case was reported this week. There have been 26 cVDPV2 cases reported this year and 48 cases in 2022.

The first case of Chikungunya in Senegal in 2023 was reported on 20 January 2023 from the district of Kebemer. As of 31 December 2023, the cumulative number of confirmed cases is 344.

In 2023, the first confirmed case of dengue was recorded in week 1. As of week 52 (ending 31 December), 310 confirmed cases of dengue were reported, of which 55% were male. Of the reported cases, 270 (87%) were confirmed by PCR and 28 cases (9%) were only IgM positive for dengue. Of the PCR-confirmed cases, 12 cases were also IgG positive. There were six cases of severe dengue and one associated death. Pikine district (135 cases, 43.5%) has the highest number of dengue cases, followed by Thilogne (38 cases, 12.3%), and Yeumbeul (31 cases, 10%).

From epidemic week 1 to 52 of 2023 (ending 31 December 2023), 1,699 suspected cases of measles were reported in Senegal, including 539 confirmed cases and no deaths. In week 52, 2023, five districts crossed the epidemic threshold, including three for the first time (Malem Hoddar, Podor, Kaffrine) and two for the second time in 2023 (Vélingara, Kaolack).

South Sudan has confirmed the re-emergence of Zika virus disease in the districts of Sédhiou and Sokone through Polymerase Chain Reaction (PCR) testing. Details regarding the age of the women in Sokone remain unspecified, and their pregnancy status has not been disclosed. There is a potential risk for adverse outcomes including microcephaly, other congenital malformations in infants, and possibilities of premature birth or miscarriage. Investigation reports are forthcoming.

In the projection period of December 2023 to March 2024 (harvest/post-harvest season), the situation is projected to improve marginally as a result of seasonal availability of harvests. An estimated 5.79 million people (45.8% of the country population) are projected to face IPC Phase 3 or above (Crisis or worse), including 25,000 people likely to be in IPC Phase 5 (Catastrophe) and 1.71 million people likely to be in Phase 4.
The humanitarian situation in South Sudan remains grim, with insecurity, sub-national violence and climatic shocks adversely affecting the food and nutrition security situation of many families, compounded by the Sudan crisis influx. The most recent Integrated Food Security Phase Classification results show that South Sudan remains one of the countries with the highest proportion of food-insecure people globally. Regarding the impact of the ongoing Sudan conflict crisis, as of 21 January 2024, 516,658 people were recorded crossing the border from Sudan to South Sudan since 15 April 2023, with 81% of these arrivals being South Sudanese and 18% being Sudanese.
